

iWorship brings a church's song library, its live worship services, and its everyday community life into one cloud-based app — usable on any phone, tablet, or computer. No church background needed to follow along: think hymn book, presentation screen, and social feed, in one place.

HYMNALS

The song library at the center of it all

One shared library: Every church sings from the same growing hymnal — no walls, no duplicate copies.

Two ways to add a song: Paste lyrics for auto-detected sections, or build one by hand. CSV/ChordPro bulk import too.

Sing Mode & Play Mode: Huge lyrics for the congregation; live chords with tap-to-transpose for musicians.

Scripture built in: A complete King James Bible, with a Tagalog translation coming soon, switchable anytime.

Daily Devotionals: A fresh reading posts automatically each day, or browse any day of the year.

Built for church teams: Self-service Church Team Roster, role-based access (Senior Pastor to Musician), and Song Requests for the free tier.

Everywhere you meet: Installable on Android, works offline mid-service, and fits any screen size.

HOST

Running the live service, start to finish

A true projector view: A second, chrome-less screen built for a TV or projector — huge, legible text only.

Split screen for hosts: Controls, a staged Preview, and the Live display together on one screen.

Everything you might project: Songs, sermons, and Bible verses, switched live from one screen.

A real sermon builder: Drag-and-drop text/image blocks, custom backgrounds, built-in verse lookup.

Media & AVP, one stop shop: Photos, video, slideshows, direct PowerPoint upload, or a live Slides/Canva embed.

A room that adapts: QR-code join, co-hosting, a private musician chart view, and session recovery if a host disconnects.

In-service chat & links: A floating chat with a musicians channel, plus a pinned livestream link.

FELLOWSHIP

A community, not just a service

A feed for the church family: Profiles with bio, photo, and favorite hymns; post text, photos, or video.

Full engagement: Like, comment, repost, and save — plus a trending and suggested-people rail.

Stories & Shorts: 24-hour Stories and a swipeable vertical Shorts feed for quick clips and testimonies.

Real conversations: DMs and group chats with read receipts and real push notifications, even app-closed.

A familiar inbox: A Messenger-style dropdown and dock make finding a chat effortless.

Safe from day one: Block and report are built in, with a real Admin moderation queue.

Desktop & mobile: Each screen size gets its own design — a layout built for a wide screen, and one built for a thumb.
